   c. Toshiba users click HERE

UPDATING DELL WIRELESS DRIVERS

The best place to locate your current wireless drivers will be the Dell Support website: http://support.dell.com/support/downloads

For the best support, you should enter your Dell Service Tag number. By entering this number, you will be taken to a page that has the information about your specific ordered product. If you have a laptop, your Service Tag will be on the bottom of your machine, and if you have a desktop, your Service Tag will be on the side or top of your machine.
The next page will display information about the machine that you ordered. Make sure that the operating system is correct, and then select Network in the Category list under network, locate the driver for your wireless connection. If the release date is newer than your current driver, download the driver.

UPDATING HP WIRELESS DRIVERS

For the best support, you should enter your HP Product Number. By entering this number, you will be taken to a page that has the information about the Model of your computer. If you have a laptop, your Product Number will be on the bottom of your machine, and if you have a desktop, your Product Number will be on the side or top of your machine. If you are having problems finding your Product Number, you can click on the link for help finding the number.
On the next page, select the current Operating System that you have installed on your machine. NOTE: The Product that matches your Product Number will be displayed in the Right Pane. If this is not correct, click the link to correct the problem.

After you select your Operating System, all the drivers for your computer will be displayed. Scroll down to the Network section. Under network, locate the driver for your wireless connection. If the release date is newer than your current driver, download the driver.

Click to download the driver.
UPDATING TOSHIBA WIRELESS DRIVERS

The best place to locate your current wireless drivers will be the Toshiba Support website: [http://www.csd.toshiba.com/cgi-bin/tais/support/jsp/home.jsp?nav=Download](http://www.csd.toshiba.com/cgi-bin/tais/support/jsp/home.jsp?nav=Download)

You will be able to find your Laptop Family and Model from the Tag that is on the bottom of your laptop.

1. Select Laptop
2. Select the family
3. Choose the Model
4. Click GO after selecting your Laptop Model

After clicking GO, the next page will display all the drivers available for your laptop. To find your Wireless Drivers, filter the results by your Operating System and then selecting Wi-Fi in the drop down box.

1. Choose your current Operating System
2. In the drop down box, select Wi-Fi to only be shown the Wireless drivers
3. Select the driver that matches the description of your Wireless Device
3. Install the new drivers
   a. Once the file has finished downloading, double click on the file to start the installation process
   b. The file that was downloaded is a zipped file, which means that the contents of the file were compressed to save space. This file will need to be unzipped so that the files are accessible during the installation

   ![Click OK to unpack the files to the default directory]

   ![Click OK to acknowledge that the files were unzipped]

c. Now that the files are unzipped, the installation will begin.

d. The installation process will vary by manufacturer, but most of the installations will only ask you to confirm the installation and the location of the files.

e. When the installation is completed, click Finish and restart your machine
